Dear Parent/Caregiver

There are many factors that contribute to our student’s success in the HSC. While a student’s attitude and effort are very important, a thorough understanding of the syllabus, assessment structure and how to prepare for assessments will have a major contribution to their results in the HSC. Students benefit from having a good understanding of how the HSC marks are awarded. It is also important for parents/caregivers to have an understanding of the HSC structure and assessment preparation so that they can support their student to help make this difficult period run smoothly.

The Science faculty will hold an information night for parents/caregivers and their students to gain an understanding of how to best prepare themselves for the HSC. We will cover the following topics:

- HSC structure
- Science course structure
- Assessment tasks
- Study tips
- Accessing resources, study guides texts and internet sites.
- Goal setting

We will provide light refreshments and ask students and parents to complete a survey to help understand your needs. It is a great opportunity for parents/caregivers to meet their student’s teachers so that both the parent and teacher feel comfortable when making contact regarding concerns in the future. We will have copies of all the preliminary study guides and question books for both parents and students to look at.

The information session will run for approximately 1 hour starting at 5:45pm on Wednesday 18th March. Light refreshments and parent teacher chat starts at 5:30pm. It is fine to come late if you can’t make it on time.

Yours Faithfully
Colin Harris
Head Teacher Science

Student name: ________________________________

I ________________ will / will not attend the Y11 Science information night on Wednesday 18th March

For catering purposes please indicate how many people will attend.
